

Approaches to Putting Library Collections Online

Neil Jefferies

R&D Project Manager, Bodleian Libraries

Neil.Jefferies@bodleian.ox.ac.uk

Introduction to BDLSS

- The Bodleian Library
 - ~1320 First University library
 - 1488 Duke Humfrey's Library
 - 1602 Bodleian Library
 - Not **THE**University Library
 - 1610 Origin of legal deposit
 - Agreement with Stationers' Company
 - ~30 “Bodleian” libraries
 - 550-600 staff
 - £36M budget
 - 13 million items in the electronic catalogue
 - Much still in paper catalogues
 - 156+ shelf miles (250 km)
 - ~30 other libraries
 - 46 college libraries
 - And a few others!
- Bodleian Digital libraries Systems and Services (BDLSS) provides electronic services for **all**
 - ILS
 - Resource Discovery and Access
 - Digital Library
 - Data Repository (soon!)

Evolving Environment

- Historically funding was often available for digitisation for whole collections
 - Metadata drawn from existing catalogues (if at all!)
 - Description rather than transcription/transliteration
 - Bias towards “easy” collections – already catalogued, in good shape
 - Collection-specific dissemination
- Ad hoc “commercial” digitisation service for individual items
 - Not strategic, many individual items and fragments, minimal metadata
- Emergence of born-digital content and electronic publishing
 - Special Collections become more important
 - Linking and metadata essential **RDF**
- Increasing volumes of material requires scalable systems
 - Standardised delivery and metadata
 - Manage heterogeneity – more content types, standards
- Increasing funding focus on research questions rather than pure content
 - Uncatalogued/unusual materials
 - Researcher rather than library driven standards and presentation
 - Interactivity

Flexibility

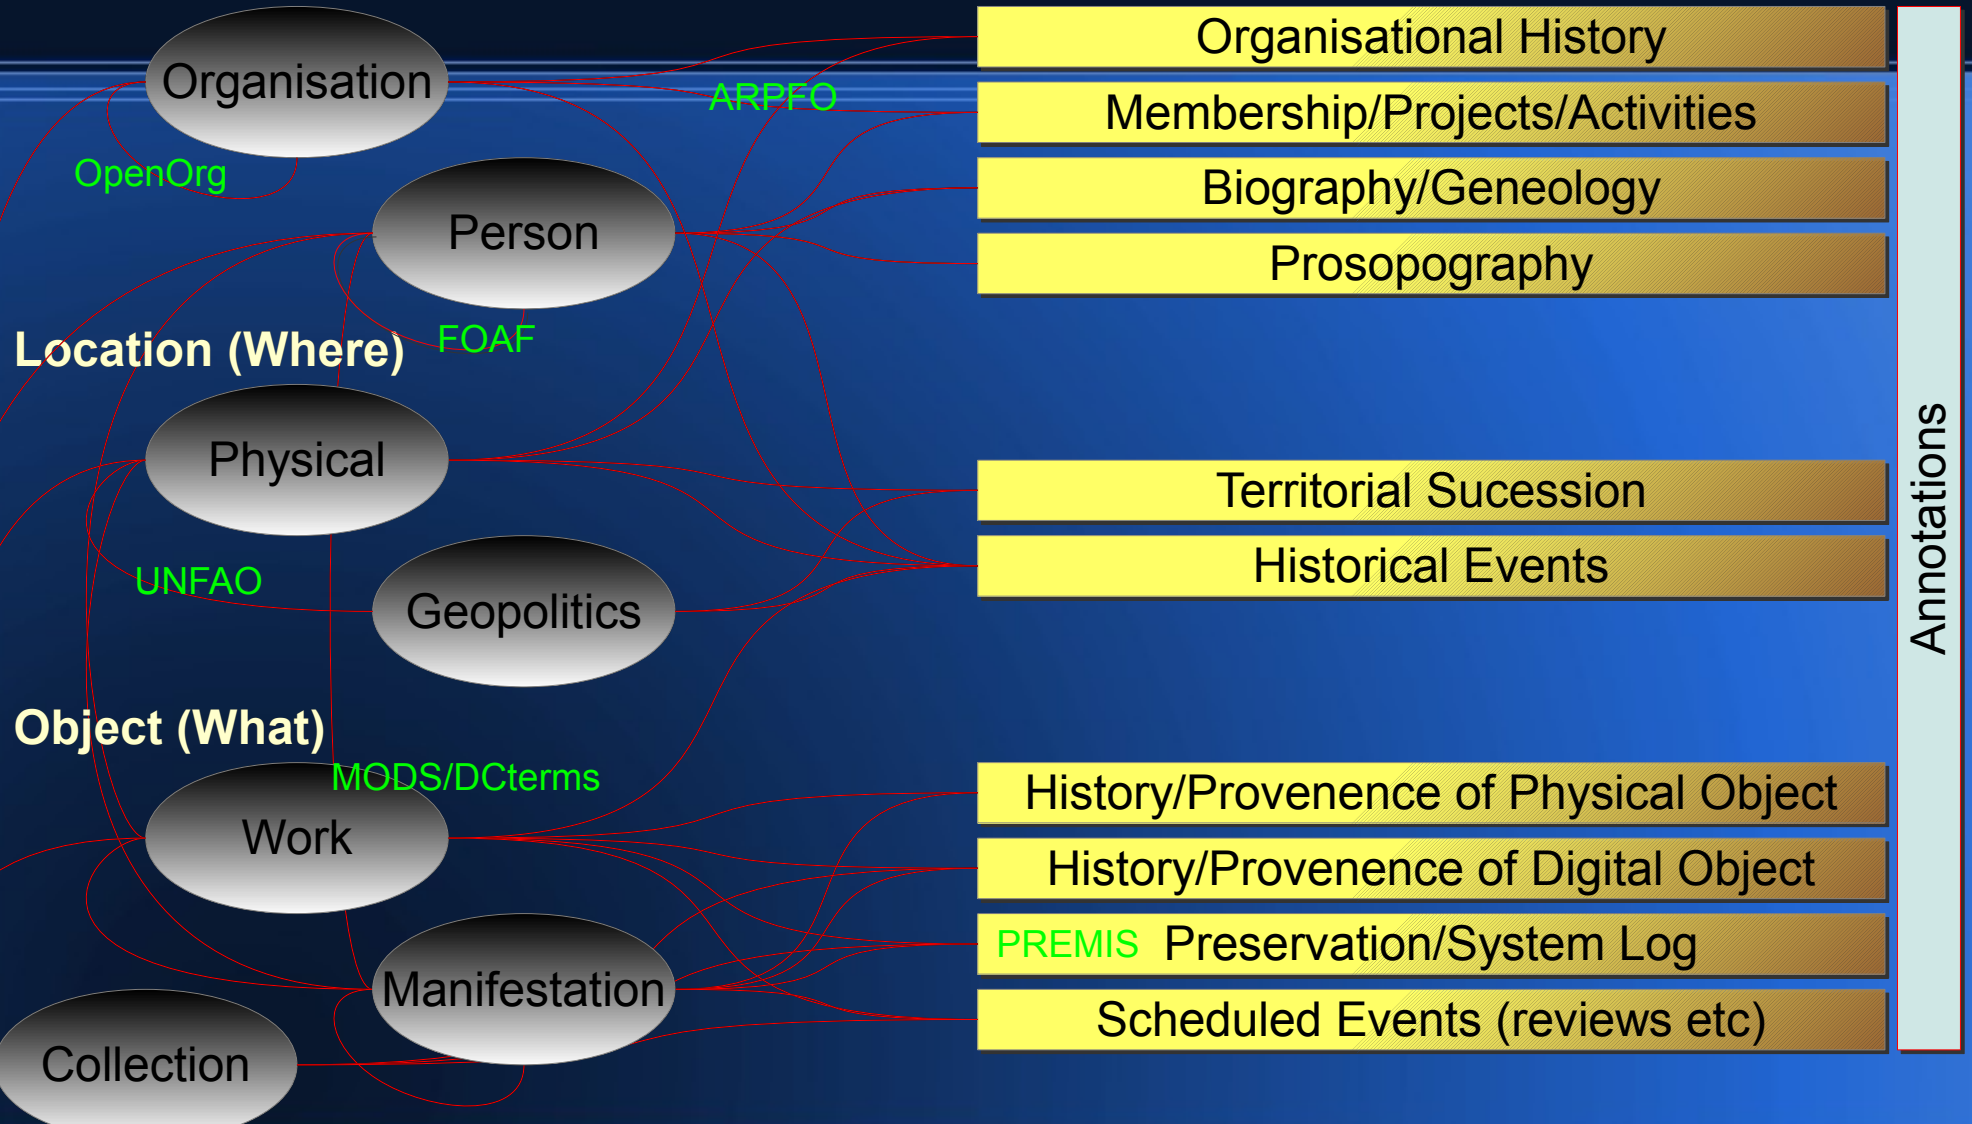

- Legacy digitised materials must be migrated to new systems
 - We do not have the resources to create much new metadata (use automation)
- The amount of digitisable content vastly exceeds our resources and capacity
 - Do we need “archival” quality images of everything? Are we a museum or a library?
 - Retool digitisation workflow for volume
 - Research driven funding changes selection criteria
 - We still have a few big donors!
 - Significant amount of material still not electronically catalogued
- Hybrid collections
 - Integrated view of physical, digitised and born digital materials
- Common platform for online collections
 - Balance standardisation with collection-specific realities
 - Amounts/quality of metadata – Minimal/DC...MODS/MARC...EAD/TEI/Provenance
 - Amount and type of content – catalogues, text, images, zoomability, rich data
 - Online critical/annotated editions, comparative texts, analytics and visualisations
 - Differing academic requirements
 - Annotation/commentary
 - Transcription/transliteration
 - Unusual languages and scripts

Abstract Data Model

Agents (Who)

Event Streams (When)

Examples

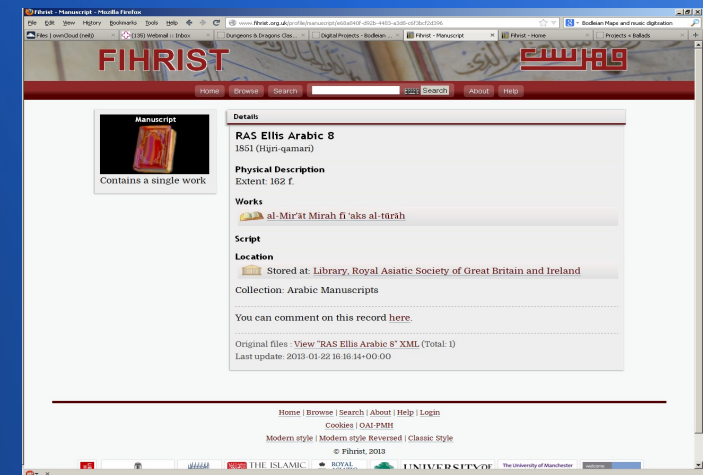

<http://www.bodleian.ox.ac.uk/bdlss/projects>

Old Catalogues Online

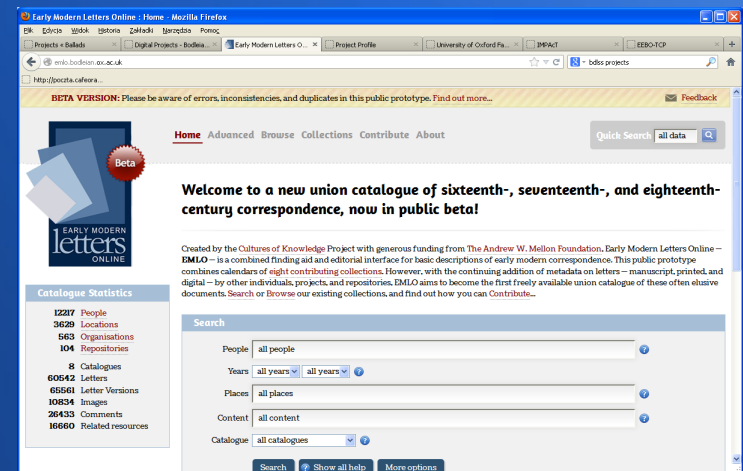

- Fihrist – National Union Catalogue of Islamic Manuscripts
 - <http://www.fihrist.org.uk>
 - Started as Oxford and Cambridge Islamic Manuscripts Online (JISC funded)
 - Records created using TEI subset (with extensive style guide)
 - Converted to RDF on upload
 - Code subsequently re-used for other mixed RTL language catalogues (Shan, Tibetan etc.)

- Maps and Music Catalogues (Mellon funded)
 - Approx 500,000 cards and paper slips digitised and keyed
 - Collection-specific metadata encoded in XML
 - Minimal conversion to MARC for ILS (circulation purposes)
- These make previously undiscoverable material visible
 - Starting point for further digitisation projects which can add content incrementally
 - e.g. Genizah (<http://genizah.bodleian.ox.ac.uk/>) is based on the Fihrist code

Enhanced Catalogues

- Catalogues to which additional enriching material has been added
 - Information about people, places, context, detail descriptions, abstracts or texts/transliterations
 - This model is very popular with researchers (especially if they can contribute!)
- Integrated Broadside Ballads Archive (JISC funded)
 - <http://ballads.bodleian.ox.ac.uk/projects>
 - 1999 online catalogue migrated to RDF semantic model
 - Links with EBBA and Roud Index
 - Experimental image search with some new colour images
- Early Modern letters Online (Mellon funded)
 - <http://emlo.bodleian.ox.ac.uk>
 - Digitised card catalogue of C17 letters
 - Enhanced with transcriptions, some images, annotations, biographies and geography
 - Data imported from other sources including new catalogues and scholarship
- IMPAcT (ERC funded)
 - <http://impact.orient.ox.ac.uk/>
 - Re-use EMLO code for C14-15 Islamic Codices

Enhanced Texts

- EEBO-TCP (JISC Funded)
 - <http://www.bodleian.ox.ac.uk/eebotcp/>
 - Early English Books Online (Partnership with Michigan University)
 - Marked up TEI-lite texts based on EEBO Images
- MLGB3 (Mellon Funded)
 - <http://www.history.ox.ac.uk/research/project/medieval-libraries-of-great-britain-mlgb3.html>
 - Online version of original book with updated content, links to resources
 - Catalogue of extant MSS with current and original location
 - Incorporates information about evidence and provenance.
- Poetic Miscellanies
 - Selected EEBO texts presented comparatively with extensive markup and annotation
- London Book Trades
 - Semantic MediaWiki resourcing mixing structured and unstructured information
 - Includes personal and geneological information
- Stationers' Register Online
 - Register of the Worshipful Company of Stationers and Newspaper Makers (1577 – 1708)

Digitisation

- Google Books
 - <http://www.bodleian.ox.ac.uk/dbooks>
 - Mass digitisation of approx. 350,000 books with OCR text and coordinates
 - Integrated with Library catalogue as holdings
- Polonsky Foundation Digitisation Project
 - <http://blogs.bodleian.ox.ac.uk/pfdp/>
 - Collaboration with Biblioteca Apostolica Vaticana
 - Target approx. 1.5M MSS
- What's the Score at the Bodleian (Google funded)
 - <http://www.bodleian.ox.ac.uk/bodley/library/special/projects/whats-the-score>
 - Digitisation of uncatalogued collection of Music MSS
 - Experiment with crowdsourcing metadata with public and expert clouds
- Sprint for Shakspeare
 - <http://shakespeare.bodleian.ox.ac.uk/>
 - Crowd-funding for digitisation of First Folio
- Digital.Bodleian
 - Migrate legacy digitisation projects to a standard platform (JPEG2000, page turner)

Summary

- Online collections are an increasingly diverse set of resources
 - Even considering just those based on traditional library materials
 - Don't be too strict about standards...the key is to make material available
 - Some standards are obviously required but keep this set small
- Interactivity and evolution are key to sustainability
 - New content and scholarship keeps a resource relevant
 - Getting content online generates research income
 - Metadata sharing and linking are essential
 - This also boosts your search ranking
- Resources should be designed to evolve
 - A card catalogue is a very focussed finding aid
 - Adding images and abstracts is **more** useful than enhancing metadata
- Legacy custom database driven Websites remain a problem
