The first of these is the
 fact that the population
 of the world is increasing
 rapidly. This is due to
 a number of factors, such
 as the increase in the
 birth rate and the decrease
 in the death rate. The
 result is that the world
 population is now over
 6 billion and is expected
 to reach 9 billion by the
 year 2050. This has
 led to a number of
 problems, such as the
 shortage of food and
 the depletion of natural
 resources. It is therefore
 essential that we find
 ways of controlling the
 population growth.
