The first part of the paper is devoted to a general
 discussion of the problem. It is shown that the
 problem is equivalent to the problem of finding
 the minimum of a certain functional. This
 functional is defined as follows:

$$J(u) = \int_{\Omega} |\nabla u|^2 dx + \int_{\Omega} u^2 dx - \int_{\Omega} f u dx$$

where Ω is the domain of interest, ∇ is the gradient operator, and f is a given function. The problem is then reduced to finding the minimum of this functional over the set of admissible functions.

It is shown that the minimum of this functional is attained at a function u which satisfies the following boundary value problem:

$$\Delta u + u = f \text{ in } \Omega$$

$$u = 0 \text{ on } \partial\Omega$$

where Δ is the Laplace operator and $\partial\Omega$ is the boundary of the domain. This problem can be solved by the method of separation of variables.

Die 22. Ca. J. Schrolli.

The second part of the paper is devoted to a detailed
 analysis of the problem. It is shown that the
 problem is equivalent to the problem of finding
 the minimum of a certain functional. This
 functional is defined as follows:

$$J(u) = \int_{\Omega} |\nabla u|^2 dx + \int_{\Omega} u^2 dx - \int_{\Omega} f u dx$$

where Ω is the domain of interest, ∇ is the gradient operator, and f is a given function. The problem is then reduced to finding the minimum of this functional over the set of admissible functions.

It is shown that the minimum of this functional is attained at a function u which satisfies the following boundary value problem:

$$\Delta u + u = f \text{ in } \Omega$$

$$u = 0 \text{ on } \partial\Omega$$

where Δ is the Laplace operator and $\partial\Omega$ is the boundary of the domain. This problem can be solved by the method of separation of variables.
